Task-3 by Durgesh kumar sahu

i)Write a DAX Query that should return a table containing all columns of the dataset but Card Type as "Platinum" only. Write the DAX query in the answer sheet.

DAX query-

PlatinumTable = FILTER(Table_name, YourTableName[Card Type] = "Platinum")

ii) In the Power BI Report View section, Create a table with customer id and salaries, write a DAX Query to create a measure that should calculate cumulative salary and add this measure to the table. Write the DAX query in the answer sheet.

DAX query-

CumulativeSalary =

CALCULATE (

  SUM (Table_name[EstimatedSalary]),

  FILTER (

    ALL (BIdataset),

    Table_name[CustomerId] <= MAX (Table_name[CustomerId])

)

)

Table_name = Reference name of the table.
